(800) 762-5902

Boulder Creek is committed to the environment. Boulder Creek Stone is more than 75 percent recycled material.

OUR COMMITMENT TO SUSTAINABILITY

At Boulder Creek Stone we owe a lot to this planet. It provides us with the resources and the inspiration to manufacture our one-of-a-kind products. In return, we do all that we can to reduce waste, conserve resources and reuse whatever materials we can. On average, our products are comprised of more than 75% recycled content and we capture and reuse more than 95% of the water used in the process. 

- Boulder Creek Stone has had a company-wide recycling policy in place since 1992
- Our current manufacturing grey water procedures date back to 2000
- Our packaging is recyclable
- Our innovative packaging materials also reduce breakage and waste, eliminating additional and wasteful manufacturing and transportation

Boulder Creek Stone products are a natural fit for projects pursuing LEED certification, providing possible opportunities in several categories.

LEED CATEGORY	LEED POINTS	INTENT	REQUIREMENT
Materials & Resources MR Credit 4.1: Recycled Content: 10% (post-consumer + ½ pre-consumer) MR Credit 4.2: Recycled Content: 20% (post-consumer + ½ pre-consumer)	1 1 point in addition to MR Credit 4.1	Increase demand for building products that incorporate recycled content materials, thereby reducing impacts resulting from extraction and processing of virgin materials.	Use materials with recycled content such that the sum of post-consumer recycled content plus one-half of the pre-consumer content constitutes at least 10% (based on cost) of the total value of the materials in the project. The recycled content value of a material assembly shall be determined by weight. The recycled fraction of the assembly is then multiplied by the cost of assembly to determine the recycled content value.
Materials & Resources MR Credit 5.1: Recycled Content: 10% Extracted, Processed and Manufactured Regionally MR Credit 5.2: Recycled Content: 20% Extracted, Processed and Manufactured Regionally	1 1 point in addition to MR Credit 5.1	Increase demand for building materials and products that are extracted and manufactured within the region, thereby supporting the use of indigenous resources and reducing the environmental impacts resulting from transportation.	Use building materials or products that have been extracted, harvested or recovered, as well as manufactured, within 500 miles of the project site for a minimum of 10% (based on cost) of the total materials value. If only a fraction of a product or material is extracted/harvested/recovered and manufactured locally, then only that percentage (by weight) shall contribute to the regional value.
